I value my entire XM Satellite Radio experience and that includes the traffic and weather information XM Satellite Radio provides its listeners.  
I would be very disappointed if HR4026 passes.

I still listen to my local stations to hear traffic and weather for more detailed information than I get on XM Satellite Radio. If the fear from the NAB is people will stop listening to their local radio all together, than those fears are unmerited. The local stations have traffic helicopters and other resources that XM Satellite Radio does not have access to, so when I hear on XM that there may be a traffic problem in my area, I switch to local radio for more detailed information.

If HR4026 passes, I will have to take a long look at the representatives in my area who support this bill and take necessary steps in my voting booth to make my voice heard.
